Webinar Wednesday! The Four M's of Well Maintenance and Cleaning - Online
Online using Zoom - You will be sent the Zoom Meeting invitation in the confirmation email.

12:00 PM - 1:00 PM Mountain Time or 11:00 AM - 12:00 PM Pacific Time

Tondee Clark, (208) 343-7001

tclark@idrwa.org

The Four M's of Well Maintenance and Cleaning: How to Diagnose and Successfully Treat your Wells for Optimal Production and Water Quality

This one-hour webinar will discuss the 4 M's associated with well failure, specifically minerals, metals, microbes, and muds. You'll discover how they form and the tricks you have to remove them for continuous production and high water quality.

We give you diagnostic tools and knowledge of the acids, dispersants, surfactants and mud removal chemistry available today. Proper disinfection methods discussed will also help you avoid repeated coliform issues.

The class will give you the knowledge and confidence to proactively maintain your wells for peak performance and water quality

Instructor: LeRoy Palmer, AmeriWest Water Services, Inc.

CEU: 0.1 Drinking Water

Cost: Free to IRWA Members / \$40 Non-Members

Location: Online using Zoom

Electrical Safety in the Workplace - Based on NFPA 70E - McCall
The Evergreen Hotel Conference Room
210 N Third St
McCall, ID 83638
08:30 AM - 04:30 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Electrical Safety in the Workplace - Based on NFPA 70E - McCall

Please note: This training is offered by Industry Training Associates and is partially supported by the Idaho Workforce Development Council as part of an Industry Sector Grant. As a requirement of this grant, participants will be asked to provide a Social Security number to the State of Idaho as a participant identifier. This will be asked for at the time of training.

Thousands of people are injured every year in incidents involving electricity. OSHA mandates that employers provide training to each employee to allow them to work safely around electrical hazards. This course will equip participants with knowledge and practical skills to help keep themselves and those around them safe in any environment where electrical hazards could exist.

This course will introduce NFPA 70E, an OSHA accepted standard, often referred to as "arc flash training" to ensure workplace electrical safety. Participants will learn the theoretical aspects of electrical safety and will have opportunities to demonstrate and practice these critical skills. They will learn to identify when additional training or instruction may be necessary for the safety of themselves or coworkers. This course will help establish employees as "qualified persons" under OSHA and NFPA standards. It will also help create and maintain a culture of safety in the workplace.

This hands-on approach to electrical safety is ideal for any individual who works around electrical equipment or for those who oversee these personnel.

Topics Covered Include:

- *Electrical hazards and how to identify them*
- *Effects of electricity on the body and mechanism of injury*
- *Relationship between various standards, regulations and oversight agencies*
- *Employer and employee responsibilities*
- *Approach and protection boundaries*
- *Electrically safe work conditions*
- *Energized work permitting*
- *Energy control procedures and equipment*
- *PPE selection, testing and application*
- *Test equipment selection and application*
- *Basic first aid and incident response for electrical incidents.*

Instructor: Aaron Ball, Industry Training Associates
Continuing Education Units (CEUs) Available: 0.6 Drinking Water/Wastewater
Cost: \$120
Lunch is generously sponsored by Mountainland Supply Company.

Idaho Water & Wastewater Security Summit - Boise
State of Idaho Chinden Campus
11311 W Chinden Blvd, Boise, ID 83714
Boise, ID 83713
09:00 AM - 04:30 PM MST
Tondee Clark, 208-343-7001
tclark@idrwa.org
Idaho Water & Wastewater Security Summit - Boise

REGISTER NOW!

The State of Idaho and its partners are inviting owners, operators, and maintainers to the Idaho Water & Wastewater Sector Security Summit on June 17th in Boise, Idaho. Join industry leaders, government officials, and security experts as they explore emerging threats and best practices for protecting Idaho's water infrastructure.

Why Attend?

- *Strengthen Cybersecurity against digital threats targeting water systems*
- *Harden defenses to protect facilities from unauthorized access and disruptions*
- *Participate in a risk and resiliency workshop and tabletop exercise focused on innovative technologies and solutions to support system resilience and security*

Agenda:

9:00 AM - 9:15 AM - Welcome & Introductions for In-Person Audience

9:15 AM - Unclassified Intel Brief: Emerging Threats Against Critical Infrastructure - In-Person Only

10:00 AM - Virtual Streaming using Microsoft Teams Link will begin for those who cannot attend in-person.

Cybersecurity Technical Assistance (CISA)

Physical Security Technical Assistance (CISA)

Defending WWS Operational Technology (INL)

12:30 PM - 1:15 PM Lunch & Networking Break

Risk & Resiliency Assessment & Emergency Response Plan Overview (EPA)

Lessons Learned from Attacks Against Critical Infrastructure (Veolia)

2:45 PM - End of Virtual Sessions

Breakout Sessions for In-Person Attendees

Risk & Resiliency Assessment Workshop OR Water & Wastewater Tabletop Exercise

4:30 PM Closing Remarks

Register with the Office of Emergency Management and sign the sign-in sheets on training day. If you need the continuing education units, IRWA will then register you with our system so you can obtain a certificate.

Continuing Education Units Available: 0.75 Drinking Water/Wastewater for in-person training or 0.5 Drinking Water/Wastewater for online training.

*Instructors: Office of Emergency Management, Idaho National Laboratory, Cybersecurity & Infrastructure Security Agency, Environmental Protection Agency
Lunch provided.*

Backflow Assembly Tester Re-Certification Course - Boise
Idaho Rural Water Association Technical Training Center
6395 W Gowen Rd
Boise, ID 83709
08:00 AM - 05:00 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Backflow Assembly Tester Re-Certification Course - Boise

Register today for Backflow Assembly Tester (BAT) Recertification Training. This will be hands-on training! Students will have the opportunity to practice on all four assembly types, troubleshoot scenarios, and ask the instructor about common challenges encountered in the field. If you pass the tests, you will earn the needed 0.8 CEUs to keep your BAT license current. The class will be held at Idaho Rural Water Association's Technical Training Center in Boise.

Instructor: Stacy Stuart, Stuart's Backflow
Continuing Education Units (CEUs) Available: 0.8 BAT
Cost: \$200
Lunch is on your own.

Confined Space Competent Person Certification Training - Boise
Idaho Rural Water Association Technical Training Center
6395 W Gowen Rd
Boise, ID 83709
08:00 AM - 05:00 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Confined Space Competent Person Certification Training - Boise

Confined Space Competent Person Course Description: The course is designed to meet OSHA requirements for confined space competent person training. The course includes professional classroom theory instruction, participant handouts, final written exam, group activities, field exercises and practical evaluation.

Curriculum covers OSHA regulatory requirements including, identifying types of confined spaces; the specific risks and hazards of confined spaces, and emergency procedures so employee can perform duties assigned. Includes training on attendant, entrant, and entry supervisor duties. Participants will be trained in basic atmospheric testing procedures, general ventilation practices, and common entry procedures. Participants will be familiarized with prevention methods, and the duties and responsibilities of the Competent Person at a confined space entry site.

Confined Space Field Exercise and Practical Evaluation: Course includes construction site training on worker safety while performing confined space entry and non-entry rescue activities. Participants will practice making confined space rescues by simulating rescue operations in which they remove manikins or participants from a confined space.

What is a confined space: A confined space has the following characteristics: Its size and shape allow an employee to enter it, it has limited openings for participants to enter and exit, and it is not designed for continuous employee occupancy.

Who Should Attend: Required for employer designated Competent Persons. OSHA requires that there is a Competent Person present whenever workers enter a confined space. All workers who perform confined space work by supervising, entering, or are responsible for attendant non-entry rescue duties are recommended to attend.

IMPORTANT CONSIDERATIONS

Safety Equipment Required: Attending participants are required to bring a Hardhat, Safety Glasses, Work Gloves, Work Boots, Reflective Vest or Jacket and wear proper Work Clothing for participation in the confined space practical exercise.

Confined Space Equipment Recommended (if you can): Participating workgroups are encouraged to bring fall their protection harness, tripod, hoist, or entry system, and calibrated atmospheric monitor, and ventilation equipment for field exercise.

Completion Requirements: Participants are required to be present and actively participate in all learning activities including hands-on exercises and a written exam to receive certification. Employees will receive a certification of completion and a competent person card by actively participating in the course and demonstrating knowledge in the classroom and at the training exercise site.

Learning Aids: Participants should come prepared with a notepad and pen. Guides and handouts will be provided at the start of the course. The presentation and materials are in English (Spanish courses are available upon request).

Course Length: Approximately 8 hours including classroom theory followed by confined space field exercises. We will be covering a great deal of information in a short period of

time; your punctuality will be greatly appreciated.

Instructor: Northwest Safety & Risk Services

Continuing Education Units (CEUs) Available: 0.8 Drinking Water/Wastewater

Cost: \$125 IRWA Members/\$145 Non-Members

Lunch is on your own.

tclark@idrwa.org

Preparing for Weather Impacts on People, Plant Equipment, and Plant Processes -

Bonners Ferry & Online

This course will help increase attendees' awareness about hot and cold weather impacts that occur in wastewater and water utility environments. This presentation will discuss:

(1) Keeping facility personnel safe. Tools to help you recognize and prevent cold and heat-related injuries will be shared. Your obligation as an employer and rights as an employee will be explained. (2) How cold and hot weather impacts plant equipment and things you should consider to avoid equipment damage. (3) How cold and hot weather can affect plant processes including biological treatment in wastewater.

Instructor: Tom Romesberg, IRWA

Continuing Education Unit (CEU) Available: 0.2 DW/WW

Cost: Free

Curriculum covers OSHA regulatory requirements including, identifying types of confined spaces; the specific risks and hazards of confined spaces, and emergency procedures so employee can perform duties assigned. Includes training on attendant, entrant, and entry supervisor duties. Participants will be trained in basic atmospheric testing procedures, general ventilation practices, and common entry procedures. Participants will be familiarized with prevention methods, and the duties and responsibilities of the Competent Person at a confined space entry site.

Confined Space Field Exercise and Practical Evaluation: Course includes construction site training on worker safety while performing confined space entry and non-entry rescue activities. Participants will practice making confined space rescues by simulating rescue operations in which they remove manikins or participants from a confined space.

What is a confined space: A confined space has the following characteristics: Its size and shape allow an employee to enter it, it has limited openings for participants to enter and exit, and it is not designed for continuous employee occupancy.

Who Should Attend: Required for employer designated Competent Persons. OSHA requires that there is a Competent Person present whenever workers enter a confined space. All workers who perform confined space work by supervising, entering, or are responsible for attendant non-entry rescue duties are recommended to attend.

IMPORTANT CONSIDERATIONS

Safety Equipment Required: Attending participants are required to bring a Hardhat, Safety Glasses, Work Gloves, Work Boots, Reflective Vest or Jacket and wear proper Work Clothing for participation in the confined space practical exercise.

Confined Space Equipment Recommended (if you can): Participating workgroups are encouraged to bring fall their protection harness, tripod, hoist, or entry system, and calibrated atmospheric monitor, and ventilation equipment for field exercise.

Completion Requirements: Participants are required to be present and actively participate in all learning activities including hands-on exercises and a written exam to receive certification. Employees will receive a certification of completion and a competent person card by actively participating in the course and demonstrating knowledge in the classroom and at the training exercise site.

Learning Aids: Participants should come prepared with a notepad and pen. Guides and handouts will be provided at the start of the course. The presentation and materials are in English (Spanish courses are available upon request).

Course Length: Approximately 8 hours including classroom theory followed by confined space field exercises. We will be covering a great deal of information in a short period of

time; your punctuality will be greatly appreciated.

Flow of Water - Coeur d'Alene

This course provides an overall view of the water and wastewater industry using the hydrological cycle as a comparison. It includes discussion on treatment technologies, storage, distribution and collections. This is a great class to inform boards, councils and the public about the importance of your utility's responsibilities. The course will be divided into three sections:

History of Water Treatment: Part 1

This course addresses when technologies were first discovered and how those technologies are used today. It also discusses whether those technologies can be applied to current treatment requirements. Topics include heat, UV, coagulation and colloidal silver treatments.

History of Water Treatment: Part 2

Explore early storage and distribution technologies and how they have led to today's systems. This course also examines whether those technologies can be applied to current treatment requirements. Topics include pipe types, corrosion control, valve types, tank and storage issues, and more.

History of Water Treatment: Part 3

Learn when chemical technologies were first discovered and how those technologies are still applied to today's treatment requirements. Topics include chlorine and its variations, ozone, fluoride, and chemical feed in general.

*Instructor: John Schwartz, USABlueBook
Continuing Education Units (CEUs) Available: 0.6 Drinking Water/Wastewater
Cost: \$120 for IRWA Members / \$210 for Non-Members

Certification Math Review - Boise/Online

Do you need a little extra help with math? Do you have an exam coming up? Join Adrianna Cardoso from IRWA for math basics and applied problems.

Course Outline:

Review of materials and supplies needed for exam

How to use the provided formula sheets during your test

Math basics – units of measurement, fractions, decimals, percent

Common measurements in the wastewater and drinking water industry – volume, area, concentration, flow, pressure

Basic dimensional analysis problems – problem solving, strategies, resources and tools

Wastewater Collection I/II Certification Review - Coeur d'Alene & Online

This is a review course for operators preparing to take a Level I or II Wastewater Collections exam. This class is based off the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its licensing exams. You will receive handouts showing specific topics to study and go through example test questions for each topic. A breakdown of exam topics will be given.

Topics include:

- ? *Equipment operation, evaluation, and maintenance*
- ? *Lift station operation and maintenance*
- ? *Collection system monitoring, evaluation, and adjustment*
- ? *Wastewater operator safety, security, and administrative procedures*
- ? *Test taking tips and procedures*

Certification Math Review should be taken in conjunction with this course; this class does not include calculations.

Sacramento State training manuals are a sought-after resource for operators preparing for state certification. This training manual was developed to serve the needs of operators in a variety of ways, including: as a self-paced, independent-study distance learning course, and as a textbook in traditional college and university classes (often taught by experienced operators). The goal is to provide you with an understanding of basic operational and maintenance concepts for wastewater collection systems and with an understanding of basic collection systems and with the ability to analyze and solve problems when they occur. ?

If desired, the Operation and Maintenance of Wastewater Collection Systems textbooks - Volume 1 and Volume 2 are available for purchase at checkout for \$110 each

Webinar Wednesday! Critical Application Solutions in Water & Wastewater - Online
Online using Zoom - You will be sent the Zoom Meeting invitation in the confirmation email.
12:00 PM - 1:00 PM Mountain Time or 11:00 AM - 12:00 PM Pacific Time
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Webinar Wednesday! Critical Application Solutions in Water & Wastewater - Online

Join us for an engaging one-hour training session where robust solutions for essential applications in water and wastewater treatment plants are introduced. Various applications focusing on solutions for automation, safety, and cost efficiency will be discussed. Instruction will also be given on the principles of operation, applications, benefits, and limitations of the following technologies: ultrasonic, non-contact radar, and pressure.

Key applications to be covered include:

- *Chemical tanks- The use of non-contact radar to create a safe environment for accurate level measurement for staff.*
- *Lift stations and pits- Overcoming ultrasonic and pressure devices, and less project management requirements.*
- *Grit traps and wash- Using automation to manage Grit.*
- *Pump room and pump monitoring and control- Pressure monitoring and flood protection in the pump room.*
- *Open channel flow- Obtaining influent/effluent flow rates for Flume and Weir.*

Fundamentals of SCADA & Telemetry - Twin Falls
Idaho DEQ Conference Room
650 Addison Ave West, Ste 110
Twin Falls, ID 83301
12:00 PM - 03:30 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Fundamentals of SCADA & Telemetry - Twin Falls

Fundamentals of SCADA and Telemetry is divided into three parts, each covering key aspects of modern SCADA systems.

Part 1 – High-Performance HMI introduces a design philosophy that enhances operator effectiveness, especially during abnormal situations. Developed by PAS Company in 2008 and now an industry standard, it emphasizes practices like hierarchical design, smart use of color, pattern recognition, and data contextualization, while also addressing operator ergonomics, control room layout, and managing change.

Part 2 – Secure in the Cloud focuses on Cloud-based SAAS concepts, emphasizing security from field systems to Cloud-resident SCADA servers. Participants will explore the benefits and risks of connected systems, addressing key questions about internet accessibility and security threats.

Part 3 – Overcoming Telemetry and SCADA Issues for Remote Sites offers tools and strategies for addressing connectivity challenges, environmental obstacles, and aging infrastructure. Demonstrations of cellular and radio telemetry systems provide scalable solutions to maintain reliability, reduce manual interventions, and enhance efficiency. This course blends technical insights, cost-effective strategies, and case studies to improve scalability and sustainability in water and wastewater monitoring systems.

Confined Space Competent Person Certification Training - Boise

Confined Space Competent Person Course Description: The course is designed to meet OSHA requirements for confined space competent person training. The course includes professional classroom theory instruction, participant handouts, final written exam, group activities, field exercises and practical evaluation.

Curriculum covers OSHA regulatory requirements including, identifying types of confined spaces; the specific risks and hazards of confined spaces, and emergency procedures so employee can perform duties assigned. Includes training on attendant, entrant, and entry supervisor duties. Participants will be trained in basic atmospheric testing procedures, general ventilation practices, and common entry procedures. Participants will be familiarized with prevention methods, and the duties and responsibilities of the Competent Person at a confined space entry site.

Confined Space Field Exercise and Practical Evaluation: Course includes construction site training on worker safety while performing confined space entry and non-entry rescue activities. Participants will practice making confined space rescues by simulating rescue operations in which they remove manikins or participants from a confined space.

What is a confined space: A confined space has the following characteristics: Its size and shape allow an employee to enter it, it has limited openings for participants to enter and exit, and it is not designed for continuous employee occupancy.

Who Should Attend: Required for employer designated Competent Persons. OSHA requires that there is a Competent Person present whenever workers enter a confined space. All workers who perform confined space work by supervising, entering, or are responsible for attendant non-entry rescue duties are recommended to attend.

IMPORTANT CONSIDERATIONS

Safety Equipment Required: Attending participants are required to bring a Hardhat, Safety Glasses, Work Gloves, Work Boots, Reflective Vest or Jacket and wear proper Work Clothing for participation in the confined space practical exercise.

Confined Space Equipment Recommended (if you can): Participating workgroups are encouraged to bring fall their protection harness, tripod, hoist, or entry system, and calibrated atmospheric monitor, and ventilation equipment for field exercise.

Completion Requirements: Participants are required to be present and actively participate in all learning activities including hands-on exercises and a written exam to receive certification. Employees will receive a certification of completion and a competent person card by actively participating in the course and demonstrating knowledge in the classroom and at the training exercise site.

Tondee Clark, (208) 343-7001

tclark@idrwa.org

Board & Council Training - Salmon & Online

This course is intended to assist with the financial, managerial and operational effectiveness of drinking water and wastewater systems. The information presented is based off of the US Department of Environmental Protection Agency (EPA) and Idaho Department of Environmental Quality (DEQ) policies along with regulations outlined in state code by the Idaho Administrative Procedure Act (IDAPA). The intent is to give elected officials or appointed board members an overview of regulations and requirements they must follow as they manage their community water and wastewater systems.

Subjects covered include: Open Meeting Laws and Requirements, Safe Drinking Water Act, American Water Infrastructure Act of 2018 (AWIA), Lead and Copper Rule Revision, Emerging Contaminants, 5th Unregulated Contaminant Monitor Rule (UCMR5), Planning for the Future, Common Challenges; Operator Requirements.

There are two more chances to take this training: Salmon River Meadows Mutual Water (9/13), and City of Fairfield (11/17). This is excellent training for board members, council members, clerks, public works directors, operators, and supervisors.

Webinar Wednesday! Fundamentals of Iron Fittings - Online

This presentation will explore the fittings that are used in potable water systems, sewer force mains, and inside water and wastewater plants. You will learn the difference between ductile and gray Iron fittings. A quick review of the AWWA Standards along with responsibilities of ductile iron fitting manufacturers will be presented. The three basic ductile iron fitting product line offerings with their applications and AWWA Installation Techniques and the Most Common Linings & Coatings for Fittings will also be explained. Wedge type restraints and their application along with the different styles of valve boxes will covered, briefly. The presentation will conclude with frequently asked questions received by fitting manufacturers.

Flow of Water - Boise & Online

This course provides an overall view of the water and wastewater industry using the hydrological cycle as a comparison. It includes discussion on treatment technologies, storage, distribution and collections. This is a great class to inform boards, councils and the public about the importance of your utility's responsibilities. The course will be divided into three sections:

History of Water Treatment: Part 1

This course addresses when technologies were first discovered and how those technologies are used today. It also discusses whether those technologies can be applied to current treatment requirements. Topics include heat, UV, coagulation and colloidal silver treatments.

History of Water Treatment: Part 2

Explore early storage and distribution technologies and how they have led to today's systems. This course also examines whether those technologies can be applied to current treatment requirements. Topics include pipe types, corrosion control, valve types, tank and storage issues, and more.

History of Water Treatment: Part 3

Learn when chemical technologies were first discovered and how those technologies are still applied to today's treatment requirements. Topics include chlorine and its variations, ozone, fluoride, and chemical feed in general.

Water Treatment I/II Certification Review - Boise & Online

This is a review course for operators preparing to take a Level I or II Drinking Water Treatment exam. This class will be taught in-person in Boise and online at the same time. This class is based off the ABC material that the Idaho Division of Occupational and Professional Licenses (DOPL) uses to create its licensing exams. You will receive handouts showing specific topics to study and need-to-know criteria for each.

Topics include:

- *Drinking water treatment methods*
- *Equipment operation and maintenance*
- *Source water characteristics*
- *Laboratory process descriptions, sampling technique, and analysis*
- *Drinking water operator safety, security, and administrative procedures*
- *Test taking tips and procedures*

Students may purchase the AWWA training manuals WSO Water Treatment, Grade 1 or WSO Water Treatment, Grade 2 for a discounted rate. Manuals are recommended but not required.

Disinfection A-Z - Boise & Online

?This class will explore one of the most important, yet complex, aspects of utility operations: disinfection. Why do we disinfect and how does the chemical process work? Learn all about chlorination, including why it is such a good disinfectant and how to improve your plant's chlorination process. Safety precautions will be included. A review of physical and chemical methods of disinfection will be provided. Discussion of operational considerations, testing procedures, and monitoring will also be covered. Finally, this class will cover dechlorination for both water and wastewater as well as alternative methods of disinfection. Come prepared to discuss problems and questions from your treatment plant! Find solutions and operational improvements to use during your daily procedures, maximize your treatment process, and meet regulations with ease.

Instructor: John Schwartz, USABlueBook

Continuing Education Units (CEUs) Available: 0.6 Drinking Water/Wastewater

Cost: \$120 for IRWA Members / \$210 for Non-Members

Board & Council Training - Fairfield & Online

Fairfield City Hall

407 Soldier Ave

Fairfield, ID 83327

6:30 PM - 8:30 PM Mountain Time or 5:30 PM - 7:30 PM Pacific Time

Tondee Clark, (208) 343-7001

tclark@idrwa.org

Board & Council Training - Fairfield & Online

This course is intended to assist with the financial, managerial and operational effectiveness of drinking water and wastewater systems. The information presented is based off of the US Department of Environmental Protection Agency (EPA) and Idaho Department of Environmental Quality (DEQ) policies along with regulations outlined in state code by the Idaho Administrative Procedure Act (IDAPA). The intent is to give elected officials or appointed board members an overview of regulations and requirements they must follow as they manage their community water and wastewater systems.

Subjects covered include: Open Meeting Laws and Requirements, Safe Drinking Water Act, American Water Infrastructure Act of 2018 (AWIA), Lead and Copper Rule Revision, Emerging Contaminants, 5th Unregulated Contaminant Monitor Rule (UCMR5), Planning for the Future, Common Challenges; Operator Requirements.

This is the last Board & Council Training of 2025. This is excellent training for board members, council members, clerks, public works directors, operators, and supervisors.

Instructor: Chris Johnson, City of Bellevue

Continuing Education Units (CEUs) Available: 0.2 Drinking Water

Cost: Free

Wastewater Treatment I/II Certification Review - Coeur d'Alene & Online

This is a review course for operators preparing to take a Level I or II Wastewater Treatment exam. You will be joining the IRWA Apprentices for this 9-hour class.

Material is based off the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its operator exams. You will receive handouts showing specific topics to study and go through example test questions for each topic. A breakdown of exam topics will be discussed.

Topics include:

- ? *Types of treatment units, their purpose, and operation*
- ? *Treatment equipment operation and maintenance*
- ? *Treatment plant monitoring, evaluation, and adjustment*
- ? *Wastewater operator safety, security, and administrative procedures*
- ? *Sampling and laboratory procedures*
- ? *Test taking tips and procedures*

(The Operation of Wastewater Treatment Plants textbook is not required but is recommended).

Instructor: Casey Fisher, Idaho Rural Water Association

Continuing Education Units (CEUs) Earned: 1.2 Wastewater and Lagoon Operation and Maintenance

Cost: \$240 IRWA Members/ \$420 Non-Members

Lunch is on your own.

(Please note, this class will provide 6 hours of Lagoon Operation and Maintenance CEUs that are needed for Very Small Wastewater System Operators. The Certification Math Review class should be taken in conjunction with this course if you are preparing to take an exam.)

Lagoon Treatment Process & Algae Control with Toni Glymph Martin - Online

We are excited to announce that we have invited Wastewater Microbiologist Toni Glymph Martin to provide 6-hours of FREE training. The participants will learn the role of bacteria, protozoa, metazoa and algae in the lagoon treatment process. The course will focus on the role of algae and how to identify the different types of algae. The participant will also gain an understanding of conditions that contribute to algal blooms along with possible corrective actions.

Instructor: Toni Glymph Martin, Wastewater Microbiology Solutions

Continuing Education Units (CEUs) Available: 0.6 Wastewater, Treatment, Laboratory Analyst

Cost: FREE - Sponsored by EPA Priority Area 5

Location: Live Virtual

These textbooks are available from Wastewater Microbiology Solutions and are a great resource, but are not required. Click on the books to read a description and see pricing.
